DETAILED ACTION

1. This Office Action is in response to applicant's amendment filed on October 4, 2004.

Allowable Subject Matter

2. **Claims 22,25,27-32,36,38 and 40-45 are allowed.**

Reasons For Allowance

3. The following is an examiner's statement of reasons for allowance:

Claims 25,28,31,40 and 41 are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that the cam follower includes a cam plate having a plurality of tracks and a plurality of switch actuators are respectively disposed within the plurality of tracks (claims 25 and 41); that the plurality of switches includes an upper set of switch arms and a lower set of switch arms and the reciprocating linear translation of the cam follower causes at least one upper arm of the upper set of switch arms and a respective at least one lower arm of the lower set of switch arms to contact each other (claims 28 and 40); and that the plurality of switches includes an upper set of switch arms and a lower set of switch arms and the reciprocating linear translation of the cam follower causes at least one upper arm of the upper set of switch arms and a respective at least one lower arm of the lower set of switch arms to contact each other (claim 31).

Regarding claims 25 and 41, Gilliom (US 3,859,979) fails to disclose that the cam follower includes a cam plate having a plurality of tracks and a plurality of switch actuators are respectively disposed within the plurality of tracks.

Art Unit: 3676

As to claims 28 and 40, Gilliom discloses that the plurality of switches includes upper and lower arms (76 and 77). However Gilliom fails to disclose that the reciprocating linear translation of the cam follower causes that the upper and lower arms contact each other, Gilliom's arms never get in contact with each other.

As to claim 31, Gilliom discloses that the plurality of switches includes upper and lower arms (76 and 77). However Gilliom fails to disclose that the reciprocating linear translation of the cam follower causes that the upper and lower arms contact each other, Gilliom's arms never get in contact with each other.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
